New Messages in Over Budget Report

New messages have been created to explain various results that may occur when you are running the Over Budget Report. These are based upon user selection criteria, user security authorization, and actual results data in the relevant scenario.

When a user requests a range, the program only returns the records associated with objects that particular user is authorized to view. There may actually be data in the table, but if the user does not have security authorization to view it, the message is:

User does not have authority to view fund center
If the user is authorized to view them, but there are no records for the object(s) or object range requested, the message is:

No records found.
