Abstract: Bans on race-based affirmative action in public university admissions have limited efforts to diversify student enrollment. Some states have resorted to allowing students in the top decile(s) of their high school graduating class (or with a minimum high school GPA) automatic admission to public universities. As a consequence, academic standards at the more selective public institutions have dropped, Blacks and Hispanics remain greatly underrepresented, and otherwise highly qualified students have been forced to attend less selective schools. This presentation will first review the effects of the “Top Ten Percent Rule” on admissions in Texas since the Hopwood decision. Then it will provide an alternative plan that will create greater socioeconomic and racial diversity, strengthen academic standards, and increase graduation rates at more selective public universities.

Dr. Nankervis received his Ph.D. in mathematics education from the University of Texas at Austin in 2006. He is currently researching inequities associated with the SAT and PSAT which result in the under-representation of females and minorities at the post-secondary level and in the awarding of scholarships. His other research interests include: high school to college transition, equity issues, teacher professional development, and technology in the classroom.
