WHAT IS A RESEARCH PARK?
A research park is more than a physical location; it is the embodiment of culture of innovation and entrepreneurship combing the excitement of discovery with a focused drive to take new products/processes to market for the benefit of mankind. Research parks provide a unique environment which attracts and enhances research partnerships, the flow of talent, the exchange of ideas and access to specialized equipment and services which accelerates the translation of ideas to realities.

Successful research parks become, in a very real sense, a community of innovation growing to a critical mass. This creates a growing pool of talent, establishes a culture of entrepreneurship, attracts companies seeking to tap the resources being created and becomes a center driving regional economic growth.

WHAT IS A BUSINESS INCUBATOR?
A business incubator is a unique and highly flexible combination of business development processes and an infrastructure of people designed to nurture new and emerging businesses during their early stages. The business incubator is designed to help new and emerging businesses thrive by giving them access to resources that can be beneficial. Having help from a business incubator, like STAR One, can help new and emerging businesses thrive as they aspire to become larger and more relevant in the community. It is a stepping stone for businesses that provides the resources and support needed for future success.
