Michael Finewood is a human geographer and political ecologist with research and teaching interests in environmental governance, water, and urban sustainability, with explicit attention to critical geographies and justice. He earned a Ph.D. in Human Geography from the University of South Carolina, where he trained as a social scientist who works on challenges in socio-ecological governance. Over his career Dr. Finewood’s interests have focused on environmental perception, expertise, and decision-making, with a concentration on water and society. He has conducted research on the social and ecological impacts of coastal development, resource extraction, urban farming, and urban stormwater governance. His current project explores the challenges of water governance across the politically and ecologically fragmented Bronx River watershed.
