

# Silhouette Cameo

I am a 2D cutter/sketcher. use special cutting blade to cut paper, stickers, and vinyl per your design! I can also sketch with any pen.

Spring 2016

## Software & Files

Try an example project!

Download Silhouette Studio (free download) and explore the library. (The library will have more items when your computer is connected to the Cameo.)

A note on installing Silhouette Studio

During the installation it will ask you to register your product; select Already Registered.

Create your own project.

You can import pictures and pdfs into Silhouette Studio, but you will likely need to trace the image, which is a setting, to cut it out. Have fun!

## Please Remember...

Bobcat Made is for personal and class projects. You are welcome to create prototypes for your own company, but no production of items for sale!

If you don't like the paper and sticker color options available (or just want to use something else), you are welcome to bring your own material.

If your project leaves a lot of small pieces stuck to the cutting mat, you can use the lint roller or the scraper tool (or both) to help clean it off.

Try the settings recommended for your material by Silhouette Studio first, and then adjust as needed.

Take a picture of your completed project for our Wall of Awesome! Print a picture, have your staff member snap a pic, or Tweet it with #BobcatMade

## Key to Success!

Please make sure the pictured lever inside the Silhouette Cameo is in the upright position before starting your cut/print! That action secures the roller bar to create even contact on the cutting mat by the roller bar (else it will feed crooked).
