The results of the learning outcomes for the Educational Talent Search Program (ETS) for school year 2010-2011 are as follows. The information was collected throughout the school year (September 1, 2010 through August 31, 2011) in the Blumen Database and then reported in the U. S. Department of Education’s Talent Search Annual Performance Report. The Educational Talent Search Program is funded to serve 950 participants of which two-thirds of the students served must be identified as both low-income and potential first generation (LIFG) students. The program was successful identifying more than 67% (79%) as LIFG, and was successful recruiting and serving 960 participants, 10 more than it is funded to serve. Of the 960 participants served during the 2010-2011 academic year, 794 were identified as non-senior (6-11th graders) participants. Of those, 765 (96%) were promoted to the next grade level in middle or high school and 14 (2%) were retained in their current grade. Additionally, there were 4 (1%) students who were unable to be tracked. Of the 960 participants served by ETS during this time, 166 were high school seniors. Ninety-nine percent (164) of the senior participants successfully graduated from high school with the additional 1% (2) not graduating due to not passing the state mandated exit level TAKS test. One hundred percent (166) of the graduating senior participants applied for admission to a program of postsecondary education through the completion of the Texas Common Application, Private, and Proprietary institution application forms. Additionally, 163 (98%) of the graduating seniors applied for financial aid by completing the Free Application for Federal Student Aid (FAFSA) and various scholarship applications. Lastly, 149 (90%) of the 166 seniors participants enrolled in an institution of postsecondary education in fall semester of 2011.
