Sustainability – Student Forum
4/28/11

Jim Morrison from the University of Mississippi, Danny Sniff for the University of Georgia

Stephen Coulston, Chris Rice, Catherine Sckerl from Broaddus Planning

These notes were taken from the meeting.

- (Maia) Texas State should retrofit the buildings with low flow aerators – faucets, toilets, shower heads, and provide light sensors
- (Janet) Why do we have to pay so much for LEED certification or could we simply go with LEED equivalent?
- (Slayton) What kind of ADA service do you have at the University of Georgia? The University of Georgia has a source of funds for which they develop a list of needs with an ADA advocacy group. They provide van service, buses, wheelchair accessible ramps and have a 15 minute class change.
- (Slayton) Shouldn’t the use of golf carts to transport students be included in the master plan?
- (Maia) If you want to make it easier for cyclists – you should ask the bikers. Money needs to go to highest and most used routes.
- (unknown) It’s more important to bike to campus than bike on campus.
- (Maia) Why can’t we lower the air conditioning temperatures on campus?
- (Slayton) – Why are we not looking more into solar?
