How do I measure my frame size?

To measure the frame size on a bicycle you will need a standard tape measure or yard stick.

You measure a bicycle frame with your bicycle resting on both tires on a level surface. Measure from the top of the frame where the seatpost inserts down to the center of the pedal crank.

Record the measurement in inches or half inches, if the measurement is in quarter inches round the measurement up to the next half inch.
(Example - 16 1/2 or 17 or 17 1/2)
