How do I measure my wheel size?

To measure the wheel size on a bicycle you will need a standard tape measure or yard stick.

You measure a bicycles tire with your bicycle resting on both tires on a level surface. Measure from the ground across the hub section on the tire to the top of the tires tread.

Record the measurement in inches, if the measurement is in half inches round the measurement up to the next inch. (Example 16” or 18” or 26”)
