If the stickers appear to be naturally peeling off due to routine handling of the device, you can replace them and make a note of the replacement on your inspection log.

---

**Instructions for Tamper Sticker Placement**

Place the sticker over a seam or a screw. Avoid a seam that would normally be opened to replace a cord, paper, or battery. Record the sticker # with its corresponding device serial number on the inspection log. They should match every time you inspect the device. The in pad below has the sticker placed over a screw on the bottom of the terminal.
