Statistics Seminar

University Libraries: Finding (good) Datasets to play or do research
Dianna Morganti

Friday, February 7 12:00 DERR 122

Abstract: Learn some strategies to start your hunt for datasets. Learn the benefits of metadata, documentation, and curation for the datasets for your research and some places to find them. Then throw all that knowledge out the window and find some super-fun and weird datasets just to play around with. From the GDP Per Capita for all the major economic countries to all the UFO sightings in San Marcos for the past 100 years, you will find out where to pull your datasets.

Dianna Morganti serves as the Math, Computer Science, and CIS Librarian, though her first love is Mathematics. As your Math Librarian, Dianna is happy to work with you to make sure that the Library supports your research, teaching, and learning through strong collections, subscriptions, and services. Come join Dianna to learn some of the sources of Data and Statistics that you have access to through the University Libraries.
