We encourage all staff and campers to take the following 7 steps to make camp as safe and healthy as we can.

*COVID-19 safety protocols may be modified based on updated and current Texas State University and CDC guidelines.

We encourage that campers get a COVID-19 vaccination

Vaccination has been shown to be safe and effective for preventing infection with COVID-19. Vaccination can also decrease the spread of infection.

Check Yourself

Each day, camp staff and campers should conduct a basic self-assessment for symptoms of COVID-19 before they come to camp. A significant proportion of those infected with COVID-19 are asymptomatic and don’t know they are infected. Variants of the virus often cause mild symptoms like a cold (headache, sore throat, runny nose and fever). If you feel like you have a cold, get tested for COVID-19 and self-isolate.

We encourage that campers get tested

COVID-19 testing is critical in our efforts to keep our camps healthy and safe. We encourage that campers receive a negative COVID-19 test within 72 hours of coming to camp. If you test positive, please contact us, but do not come to camp.

Mask Up

Face masks have proven very effective in preventing the spread of COVID-19. You may choose to wear a face mask indoors to help prevent the spread of COVID-19. Face coverings are not required at Texas State.

Stay Home

Sick persons are asked to stay home and not come to camp. Please contact us if you test positive for COVID-19 close to camp.

Wash Up

Frequent hand washing is one of the most important things we must do to keep our community safe. When hand washing is not possible, hand sanitizer is a good substitute. Hand sanitizer will be available to campers.

Cover Up

Remember to cover your mouth and nose when you cough or sneeze. Review the [CDC guidance](https://www.cdc.gov/coronavirus/2019-ncov/index.html) on covering your mouth, sneezing and coughing.
