Two-day course on Mondays:
November 5 and 12
2 - 4:30p.m.
JCK 460
Avery 365

Personal and DIY Security

In this two-part, two-day course, a Texas State information security professional will introduce you to the basics of security and encryption, and common threats you may encounter in everyday life. You’ll learn how to think critically about the risks you and your family face and how to handle them proactively.

Learn to identify malware, ransomware, social engineering tactics, and internet scams that seek to exploit or sell your personal information. You’ll be guided through developing your own personal risk assessment to discover your vulnerabilities and your most valuable assets, so you can protect what matters most.

Unique content will be taught each day and attendance to both days is required as part of registration.
