Mapping the Landscape:
The Power of Water on People’s Lives

This workshop focuses on how to use technology to explore the relationship between water and people. From settlement patterns, natural hazards, and natural resources, participants will use ArcGIS Online and GeoInquiries to explore the power of water on people’s lives. This is an excellent workshop to learn ways to incorporate technology into your classroom, network with other teachers, and enhance your geography content and skills knowledge.

At the end of this 12-hour workshop, you will

- Be able to identify, describe, and discuss the geography concepts and skills in the TEKS,
- Be able to use ArcGIS Online, and
- Know how to effectively incorporate and use GeoInquiries in the K-12 classroom.

Participants will receive 12 hours of CPE credit and are eligible for a $60 stipend upon successfully completing the workshop. Lunch is provided.

Audience: K-12 educators and education influencers. Although the workshop focuses on geography, it is relevant to all social studies as well as earth science and environmental sciences and other courses.

Locations and Dates:
June 30 – July 1
September 10 & 17 at University of Texas at Arlington in Arlington*, 8:30 am – 3:30 pm
