Secure WIFI and Home Networking

The threat of cyber-attacks multiplies every year. Many home networks do not follow best practices, leaving you vulnerable to attacks, data theft, and fraud. This workshop will empower you with the knowledge and skills to secure your home network and protect your vital personal data.

An expert analyst from the Office of Information Security will take you on a deep dive through fundamental concepts to secure and improve the overall performance of your home network.

Workshop Topics:

- Fundamental networking terminology and concepts
- Home network and WiFi security best practices
- Improving home network and WiFi performance
- Protecting your digital privacy

Please join us as we work to improve digital security in our community!

Note: This is a new workshop intended to help faculty and staff be more secure both on and off campus. This serves as a supplement to “Personal and DIY Security” workshop, but that course is not a prerequisite to take “Home Network & Wii Security.”
